Encryption Self-Classification Report

MOOMOLAB LLC · Inditalk (iOS) · ECCN 5D992.c · Submitted to BIS (crypt@bis.doc.gov) and NSA (enc@nsa.gov), 27 July 2026

Company Name	MOOMOLAB LLC
Point of Contact	Chandan Kumar
Telephone	+1 312 296 4209
Email	moomolab@gmail.com
Mailing Address	3361 South Wabash Avenue, Chicago, IL 60616, United States
Product Name	Inditalk
Model / Version	1.0
Manufacturer	MOOMOLAB LLC
ECCN	5D992.c
Authorization Type	Mass market self-classification (License Exception ENC / MMKT, 740.17(b)(1))
Item Type	Mobile application software (iOS) - consumer messaging, voice and video calling
Product Description	Consumer messenger for Apple iOS. One-to-one and group text messaging with photo, video, voice-note, document and location attachments; one-to-one voice and video calling over WebRTC; 24-hour status updates. Distributed publicly and without restriction through the Apple App Store to the general public at retail. Encryption protects user message content in storage and all data in transit.
Non-Standard Cryptography	No - all algorithms are published international standards (IETF RFC / NIST FIPS). No proprietary or unpublished cryptography is implemented.
Open Cryptographic Interface	No
Encryption Algorithms and Key Lengths	X25519 ECDH key agreement (RFC 7748, 255-bit curve); Ed25519 signatures (RFC 8032, 255-bit curve); ChaCha20-Poly1305 AEAD (RFC 8439, 256-bit key); HKDF-SHA256 (RFC 5869, 256-bit); HMAC-SHA256 (RFC 2104, 256-bit); SHA-256 (FIPS 180-4). Key management uses an X3DH-style handshake and a Double Ratchet, both published designs composed solely from these standard primitives.
Third-Party Encryption Components	BoringSSL via Firebase/gRPC - TLS 1.2/1.3: AES-128-GCM, AES-256-GCM, ECDHE, RSA up to 4096-bit. WebRTC - DTLS-SRTP: AES-128-GCM, AES-128-CM-SHA1-80. Apple CryptoKit (operating-system framework).
Mass Market	Yes - generally available to the public via the Apple App Store, sold at retail without restriction, with encryption functionality that cannot be easily changed by the user.
Country of Manufacture	United States
Reporting Period	Calendar year 2026
Notes	Encryption is used to protect user communications only. The application performs no cryptanalytic functions, provides no open cryptographic interface, and is not specially designed for government or military end use.
